 **perfect digital**  
SELF ADHESIVE

The Perfect Label range provides the perfect solution to your labelling needs with a comprehensive range of specially developed products that cater for all of the major printing techniques and applications. Accurate

die cutting guarantees perfect register every time and the high quality adhesives ensure superb performance on an extensive range of substrates.

## Multi-purpose - laser, copier, inkjet labels

An A4 range of labels designed to combine trouble free feeding through laser, copier and inkjet printers together with excellent toner fusing qualities. The adhesive is formulated to withstand the high temperatures associated with some of these printing processes and is also suitable for litho printing. The range includes a number of Avery compatible sizes/layouts.

## Bespoke labels

Most of the Perfect label range is supplied from stock, but a wide collection of tools exist (or can be made) to provide a label in a size or material to suit your specific requirement. Labels are also available in roll and fanfold formats.

Bespoke features including perforations, window trims, peel out sections, special packaging etc are also available.

A4 Speciality Laminates including colours, opaque, coated, deep freeze, high resolution paper, card, photo quality & filmic materials are available as standard in a number of popular label sizes/layouts.

## Printers labels

The Perfect Label range of printer's blanks is specifically designed for litho printing where a more rigid sheet is preferred and an ink receptive surface is important. They are also compatible with most laser, digital and inkjet processes so are an ideal choice if pre-printing is required.

Available in 5 sheet sizes and packed 200 sheets per box. A choice of adhesives and face materials are available as standard, including colours and cast coated face papers.

## A4 sheet range

A wide selection of face materials including paper and boards, colours, fluorescent and filmic materials, available in solid back and split back options and a choice of adhesives in A4.

An SRA3 range of self-adhesive Sheets and Labels developed to meet the exacting demands of the SRA3 digital market where trouble free running and print quality are key requirements.

## Integrated labels

Ask about our range of integrated labels.

### How to find the right product

First decide what the primary printing process will be. For example, if the main printing process is litho, select a label from the printers range which has a face paper ideally suited for this process. Alternatively, if the primary printing process is laser, copier or inkjet select a label from this range.

Next, select the label size. All label sizes are listed with the smallest dimension first and in ascending size order. Now finally check the sheet size, adhesive and printing surface is suitable.

A range of sheets and labels are available in SRA3 sheet formats in the Perfect Digital range.

Most materials can be printed by any of the conventional printing processes.

A wide range of face materials and adhesives are available in the bespoke label range and A4 sheet range if you are looking for something special.

Please ensure that materials are thoroughly tested to ensure that they satisfy the requirements of the end user and are compatible with the printing and conversion processes.

### Label range

# Bespoke labels - A4 speciality laminates

Packed 500 sheets per box our speciality laminate range of materials are available in any of the listed sizes in the laser, copier and inkjet range. With only a 1 box minimum and a guaranteed fast lead-time, speciality

labels can be produced to satisfy most requirements. The range is ideal for any size of job, being packed 500 sheets per box reduces handling time and saves on wasteful packaging if larger volumes are needed.

A4 range	PLA4	1x1	1	200	210x297	Back slits	■	■	■	■	■	■	■

A range of A4 sheets available in paper, board, speciality and filmic materials with a choice of adhesive and backing sheet options.

We also ensure that our products are easy to convert and can be kiss cut or guillotined with ease.

The back-splits are precision cut using specially selected kraft and precision knives to ensure that there is no show through onto the printing surface and each split works perfectly.

Other sizes, materials and pack sizes available on request.

The label layout is standard on all label sizes giving a consistent 13.25mm margin on the leading edges (both grip and lay) and with a constant 2.5mm gap between the labels. The label format is repeated twice on the sheet so that two A4 sheets can be produced from an SRA3 sheet.

## More Labels per sheet:

The label layouts are designed to use the available area as efficiently as possible which means we get as many labels on a sheet as we can. More labels per sheet help to reduce production cost and wastage and it's environmentally sensible.
